Wells Endodontics is offering GentleWave® Technology for better cleaning, less invasive Root Canal Therapy

Nobody wants a root canal! But when your dentist tells you that it is necessary, or your tooth is throbbing with intense pain and you want relief, you need to see an endodontist. If you ever find yourself in that predicament, why wouldn't you choose the Harvard-trained endodontist who has performed well over 10,000 successful root canals and who has invested heavily in the latest technology to complement his considerable expertise and experience? Why wouldn't you choose one of the three top endodontists selected in a blind survey of their peers as published in the June/July 2016 issue of TAMPA magazine?

Dr. Brian Wells and Wells Endodontics have been serving the greater Tampa Bay area since 2007. The quality root canal therapy we have provided to thousands of satisfied patients relieves their pain once and for all and allows them to keep their natural teeth. Having been selected as the first practice in the Eastern United States to utilize the GentleWave® Multisonic Ultraclean™ System, Wells Endodontics is now the only place in Florida where you can be assured of this superior level of root canal cleaning and disinfection.

Dr. Wells has been following the studies related to the GentleWave® system in scientific journals for several years. He is

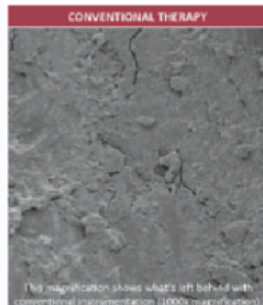

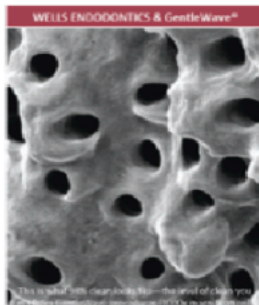

impressed with the technology and with the well-documented outcomes it provides. Multisonic Ultraclean™ technology leaves virtually no portion of canal space untouched and disinfects at a level conventional methods simply cannot.

This procedure utilizes a single-use sterilized hand piece to deliver broad spectrum acoustic technology and a powerful vortex of cleaning fluids throughout every canal enabling Wells Endodontics to provide its patients with:

- Superior cleaning and disinfection in all areas of the root canal anatomy
- Reduced procedure time and post-procedure pain
- Removal of all infected tissue
- Faster healing with reduced chances of reinfection and
- Reduction of potential complications associated with traditional root canal therapy.

Dr. Wells believes this new technology, the product of over ten years of intensive research and development, represents an entirely new way of thinking about root canal therapy. More importantly, though, he knows it will enable him to improve upon even the exceptionally high quality of patient care already established as the cornerstone of his successful endodontic practice in Wesley Chapel. We are extremely excited to be part of this significant advancement in endodontic treatment and to be the exclusive provider of the improved quality of care made possible with the GentleWave® Multisonic Ultraclean™ System.
